

PROSE Technologies Earns Top SME B-Level CDP Rating Again in 2025

Donauwörth, Germany — PROSE Technologies has once again been recognized for its outstanding commitment to environmental management and sustainability by CDP, the global environmental non-profit that operates the world's independent environmental disclosure system.

For the 2025 reporting cycle, PROSE Technologies earned a B-level rating, which is the highest score available for small and medium-sized enterprises, for climate change based on data disclosed through CDP's questionnaire. This rating reflects the company's commitment to transparent environmental disclosure and governance.

This recognition comes as part of CDP's global assessment of nearly 20,000 companies scored in 2025, with more than 22,100 companies reporting environmental data through CDP's platform in the same year.

CDP applies a rigorous methodology to evaluate disclosure quality, awareness of environmental risks and opportunities, and management practices. Its scoring system is widely used by investors and procurement teams to inform decision-making and support a sustainable, net-zero economy. CDP is fully aligned with the Task Force on Climate-related Financial Disclosures (TCFD) framework, underscoring the relevance of high-quality environmental reporting in today's financial and regulatory environment.
